

Welcome to **CoreOptics**

Job Offerings for Students

Practical Study Semester

Duration: 3-6 months.

Time terms and occupational assignments correspond to the practical study semester regulation. You will work in an interational professional team and carry out interesting tasks within different projects. Voluntary practical trainings for more than 3 months are welcomed.

Working Student Occupation

Duration: 20 hours / week, long-term occupation is desirable.

As a working student you have a chance to get to know the workflow of our company and to gain a lot of practical experience. You will find our up-to-date vacancies on our website following the link careers.

Diploma, Bachelor and Master Projects

Duration: 6-9 months.

A subject of a diploma, bachelor or master work will be defined together with an applicant and a surpervising professor.

Promotion

On request.

Anja (23), Working Student

I've started as a working student at CoreOptics at the beginning of 2007. And I felt like an equal part of a CoreOptics „big family“ from the very first moment. I have already taken part in different interesting projects, got to know many pleasant people and gained a lot of practical experience. Now I am planning to write my diploma there.

Dietmar (32), HW Design, System Test

My career at CoreOptics began during my communications and electro-technics studies as a working student. At that time I could participate numerous projects as an equal member of team and I wrote my bachelor's thesis there. At the moment I support testbeds, which are used to specify and to characterize our products.

Preferred fields of studies

- **Electrical / Communications engineering**
- **Physics / Mathematics**
- **Industrial engineering and management**
